# Galactic Compass

The day you were born was coded by one of 260 Kin, this is your Galactic Signature, and your password into the fourth-dimension! You can obtain it using the GALACTIC COMPASS. Construct it and discover your KIN (galactic gateway) and get your code spell as it is explained on the Code Spell page (page 13 in your 13 Moon Pocket Calendar). You can also get other people's Galactic Signature, as well as any date in the past or until 2013. Have fun!

How to Build your Galactic Compass

Color the compas as shown below, cut out the parts, glue number 6 and number 7 together and the arrange them as in the picture. Attach the circles at the center.

Glue on back

7 Galactic Ephemeris

6 Green Ring

5 Yellow Ring

4 White Ring

3 Day Ring

2 Wavespell Ring

1 Color Dial

Attach together

GALACTIC COMPASS DIRECTIONS

The Adventure of Using the Galactic Compass and Entering Fourth-Dimensional Time

The back side of the compass is the Galactic Ephemeris for AD 1754 to 2013. On the outer rim is a sequence of 52 KIN or galactic gateways. Each of these galactic gateways is a combination of one of thirteen tones (1-13) and one of four solar seals, e.g. 8 wizard, 9 storm, 10 seed, 11 moon, etc. For any year on the Ephemeris, each of the 52 galactic gateways correlates to one date only: July 26.

1. Using the Galactic Ephemeris: Write down the date you want to look up. If the date you seek is before July 26th, look up the previous year.

2. Finding the Year: Find the year you are seeking and follow the row to the outer edge. Write down the tone number and solar seal. Using the Galactic Tones page look up the tone notation. Turn compass over.

3. Find 07.26 on the green outer ring. Find the tone from step two on the yellow ring and align it with 07.26. Hold the yellow ring in this position.

4. Finding the Correlate Date: On the green ring, find the boldfaced correlate date closest to the date you seek. Note the tone on the yellow ring immediately below the correlate date.

5. Matching the Tones: Move the white ring so that the tone matches the yellow tone below the correlate date from step four. There are now two matching tones beneath the correlate date on the green ring. Hold the green, yellow and white rings in this position.

6. Finding the Galactic Gateway: On the day ring of the twenty solar seals, find the solar seal from step two. Line up that solar seal beneath the two matching galactic tones from step five. You now have the galactic gateway for the green ring correlate date. You may now let go of the Yellow and Green Rings.

7. On the white ring and the day ring each tone and each solar seal represent one day. Starting from the tone and solar seal of your correlate date, you will now count on the day ring to find the date you seek. If the date you seek is before the correlate date, count each seal to the right (clockwise) until you arrive at the date you seek. And if the date you seek is after the correlate date, count each seal to the left (counter-clockwise) The solar seal that you land on and the tone immediately above it are the galactic gateway of the date you are seeking!

Note: should the solar seal of the day you land on have a white space above it, use the following procedure. The blank spaces on the white ring represent half of a wavespell either preceding or succeeding, depending upon the direction you come from. If you are counting left (counter-clockwise) the blank space on the white ring next to tone thirteen begins the count of tone one through tone seven of the next wavespell. If you are counting from the right (clockwise) the blank space next to tone one begins the count back from tone thirteen to tone seven of the previous wavespell. Wherever your count stops on the day ring, bring the corresponding tone on the white ring to line up with that solar seal.

Congratulations! The solar seal that you land on and the tone immediately above it are the galactic gateway of the date you are seeking! Now hold the white ring and day ring in the position.

8. Securing the Wavespell: To determine the wavespell of the galactic gateway, find tone one on the white ring and note the seal immediately below. Move the innermost ring (the wavespell ring) until the same solar seals are lined up below tone one. Now two matching seals are lined up below tone one. This solar seal is the name of the wavespell for your desired date.

9. Locating the Castle: The color of the band directly below the tone one wavespell seals identifies the castle in which that wavespell occurs. Without moving any rings, go back to the galactic gateway seal and note that the seal below this (on the wavespell ring) us the guiding power for the seal. The Earth family of any seal can be determined by the four compass points. Use the color dial to find your Earth family.

Leap Day: If you were born on February 29 before noon local time, use February 28. If you were born on February 29 after noon local time, use March 1.

Sample dates to test yourself:

John Lennon: 10.9.1940 = 10 wizard

Hiroshima Day: 8.6.1945 = 3 eagle

W. A. Mozart: 1.27.1756 = 13 storm
